

VIC-II Color Cheat-Sheet

by Groepaz

This is a cheatsheet i made for myself (very) long ago, when 320x200 was still top notch on PCs :)

The upper part of the diagram shows the measured VIC-II luminances from different revisions (different dot colors). This isnt very useful per se i guess :)

The lower part shows how the 16 VIC-II colors are spread around the RGB colorspace (very much estimated), which colors are available in multicolor charset, and imho is a nice help to create proper shadings for rasterbars and such things (simply walk from left to right on the diagram, jumping to the next color).
