

# Wersiboard Music 64

This is a claviature for the C64, connected through the cartridge port. It is mapped to \$df00-\$df06, and every key corresponds to one bit each in those seven bytes respectively, except for \$df06, where only bit 0 is used. This is because the keyboard consists of  $(6*8)+1$  keys, and therefore 6 bytes is not enough to cover all of the keys. A bit weird, but that is how we like it.
